Project Name	Predictive Pulse: Harnessing Machine Learning for Blood Pressure Analysis
Maximum Marks	4 Marks

Empathy Map – Predictive Pulse: Blood Pressure Analysis

User

Healthcare Professional / Patient monitoring blood pressure

What does the user THINK & FEEL?

- Concerned about early detection of hypertension
- Wants accurate and quick health analysis
- Worried about missing warning signs of heart disease
- Interested in technology that helps improve diagnosis

What does the user SEE?

- Increasing cases of hypertension and heart disease
- Patients needing faster diagnosis
- Healthcare systems using digital health tools
- Medical data that requires analysis

What does the user HEAR?

- Doctors recommending regular blood pressure monitoring
- Medical advice about early disease detection
- News about AI and machine learning in healthcare
- Discussions about preventive healthcare

What does the user SAY & DO?

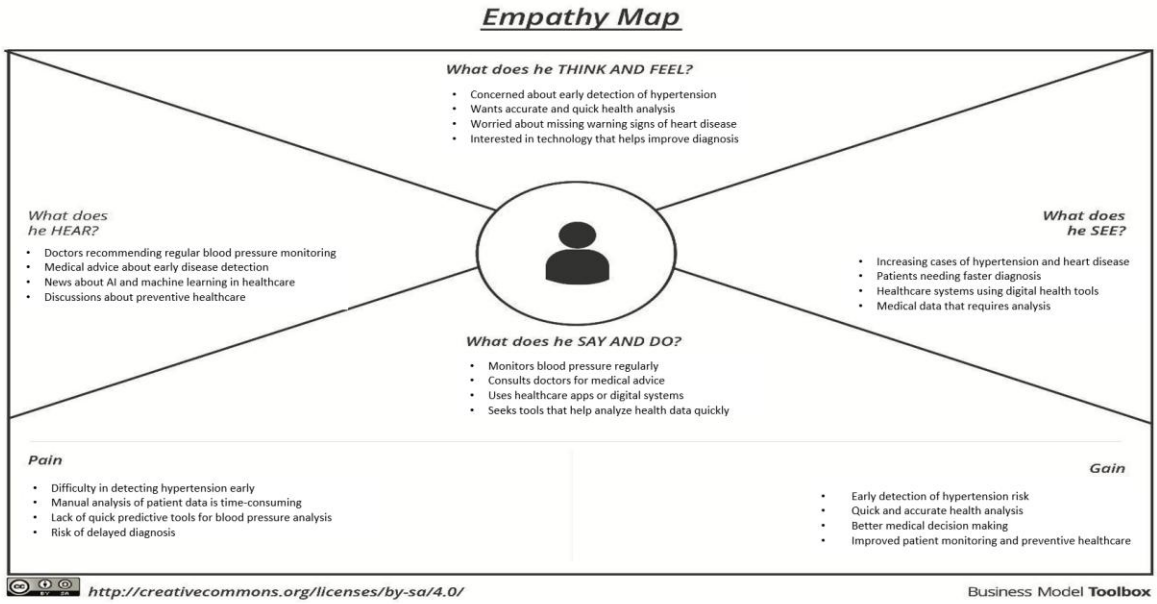
- Monitors blood pressure regularly
- Consults doctors for medical advice

- Uses healthcare apps or digital systems
- Seeks tools that help analyze health data quickly

PAIN (User Problems)

- Difficulty in detecting hypertension early
- Manual analysis of patient data is time-consuming
- Lack of quick predictive tools for blood pressure analysis
- Risk of delayed diagnosis

GAIN (User Needs / Benefits)

- Early detection of hypertension risk
- Quick and accurate health analysis
- Better medical decision making
- Improved patient monitoring and preventive healthcare


Example:
